```
1 \NeedsTeXFormat{LaTeX2e}
2 \ProvidesPackage{gmeometric}
3 [2008/11/22 vo.73 to allow the `geometry' macro in the
   document (GM)]
```

Introduction, usage

This package allows you to use the \geometry macro, provided by the geometry v3.2 and v4.1 by Hideo Umeki, anywhere in a document: originally it's clauseed @onlypreamble and the main work of gmeometric is to change that.

Note it's rather queer to change the page layout *inside* a document and it should be considered as drugs or alcohol: it's O.K. only if you *really* know what you're doing.

In order to work properly, the macro should launch the \clearpage or the \cleardoublepage to 'commit' the changes. So, the unstarred version triggles the first while the starred the latter. If that doesn't work quite as expected, try to precede or succede it with \onecolumn or \twocolumn.

It's important that \clear(double)page launched by \geometry not to be a no-op, i.e., \clear(double)page immediately preceding \geometry (nothing is printed in between) discards the 'commitment'.

You may use gmeometric just like geometry i.e., to specify the layout as the package options: they shall be passed to geometry.

This package also checks if the engine is X_ET_EX and sets the proper driver if so. Probably it's redundant since decent X_ET_EX packages provide their geometry.cfg file that does that.

Installation

Unpack the gmeometric.tds.zip archive in a texmf directory or put the gmeometric.sty somewhere in the texmf/tex/latex branch on your own. Creating a texmf/tex/latex/gm directory may be advisable if you consider using other packages written by me.

Then you should refresh your T_EX distribution's files' database most probably.

* This file has version number vo.73 dated 2008/11/22.

Contents of the gmeometric.zip archive

The distribution of the gmeometric package consists of the following four files.

```
gmeometric.sty  
README  
gmeometric.pdf  
gmeometric.tds.zip
```

Compiling of the documentation

The last of the above files (the .pdf, i.e., *this file*) is a documentation compiled from the .sty file by running L^AT_EX (twice) on the gmeometric.sty file (`xelatex gmeometric.sty` in the directory you wish the documentation to be in, you don't have copy the .sty file there, T_EX will find it). Compiling of the documentation requires the packages: gmdoc (gmdoc.sty and gmdoc.cls), gmverb.sty, gmutils.sty, gmiflink.sty and also some standard packages: hyperref.sty, color.sty, geometry.sty, multicol.sty, lmodern.sty, fontenc.sty that should be installed on your computer by default.

If you have not installed the mwart.cls class (available on CTAN in mwcls package), the result of your compilation may differ a bit from the .pdf provided in this .zip archive in formatings: If you have not installed mwart.cls, the standard article.cls class will be used.

Usage

The main use of this package is to allow the \geometry command also inside the document (originally it's \onlypreamble). To make \geometry work properly is quite a different business. It may be advisable to 'commit' the layout changes with \newpage, \clearpage, or \cleardoublepage and maybe \one/twocolumn.

Some layout commands should be put before \one/twocolumn and other after it. An example:

```
\thispagestyle{empty}  
\advance\textheight 3.4cm\relax  
\onecolumn  
\newpage  
\advance\footskip-1.7cm  
\geometry{hmargin=1.2cm,vmargin=1cm}  
\clearpage
```

And another:

```
\newpage  
\geometry{bottom=3.6cm}
```

In some cases it doesn't work perfectly anyway. Well, the (LPPL) license warns about it.

The code

⁴ \RequirePackage{gmutils}[2008/11/21] % this package defines the storing and restoring commands.

Redefine \onlypreamble, add storing to BeginDocument.

\gme@tobestored

⁵ \newcommand*\gme@tobestored[1]{% this list consists of the cs'es relaxed at begin

```

document by geometry (the only \AtBeginDocument in geometry v4.1).
6   \Gm@cnth\Gm@cntv\c@Gm@tempcnt\Gm@bindingoffset\Gm@wd@mp
7   \Gm@odd@mp\Gm@even@mp\Gm@orgpw\Gm@orgph\Gm@orgw\Gm@orgh
8   \Gm@dimlist\}
9 \AtBeginDocument{\@xa\StoreMacros\gme@tobestored}
10 \StoreMacro\@onlypreamble
11 \let\@onlypreamble\@gobble
To make it work properly in XETEX:
12 \@ifXeTeX{%
pdfoutput 13   \@ifundefined{pdfoutput}{\newcount\pdfoutput}{}
14   \PassOptionsToPackage{dvipdfm}{geometry}%
15 }{%
16 \RequirePackageWithOptions{geometry}
Restore \@onlypreamble:
17 \RestoreMacro\@onlypreamble
Hypothesis: \ifx...@\undefined fails in the document because something made
\csname\Gm@lines\endcsname. So we change the test to decent. And i think I've
found the guilty: \@ifundefined in \Gm@showparams. So I change it to the more ele-
gant \ifx\@undefined.
\Gm@showparams 18 \def\Gm@showparams{%

68 -----

```

Add restore to BeginDocument:

```

69 \AtBeginDocument{\@xa\RestoreMacros\gme@tobestored}
70 \endinput

```

Change History

vo.69

General:

CheckSum 40, o

vo.70

General:

Back to the vo.68 settings because
`\not@onlypreamble` was far too
 little. Well, in this version the
 redefinition of `\geometry` is given up
 since the ‘committing’ commands
 depend on the particular situation so
 defining only two options doesn’t
 seem advisable, 70

CheckSum 36, o

vo.71
